PROJECT OVERVIEW

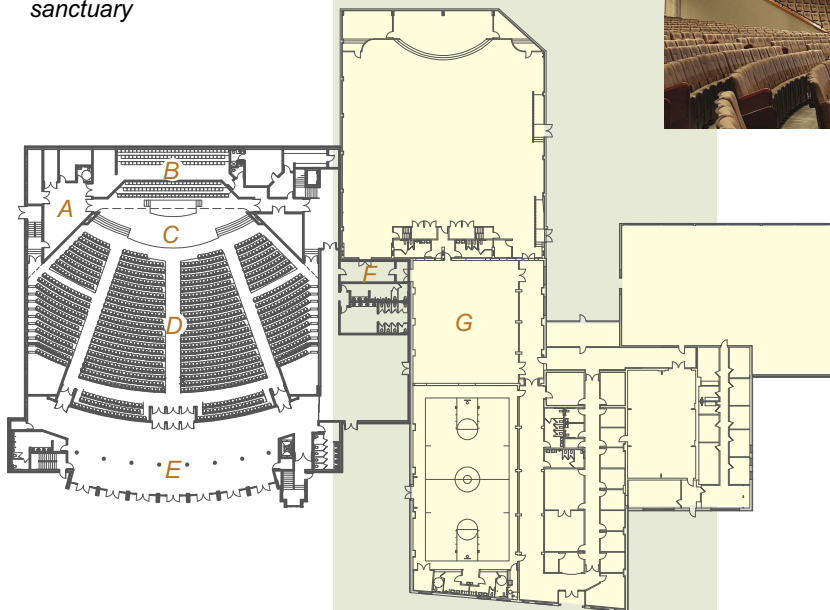

An inner city Baptist congregation adds a state-of-the-art sanctuary and support areas. Project architect, St. Louis Design Alliance creates worship space that increases their campus by nearly 35,000 square feet. The entrance to the new facility has a very contemporary design created with 3 stories of windows. Huge faux marble pillars and intricate mosaics on the lobby floor greet parishioners as they enter. A new sanctuary with seating for 2200 includes a full depth stage, chancel with curtain, and state of the art audio visual system.
